Types of Linked Lists

Q. Elaborate on the different types of Linked Lists. Explain Singly, Circular, and Doubly Linked Lists with their structures and diagrams.

> **Definition to Remember**

> Link
(last n

---

1. Singly Linked List

The simplest type. Each node contains data and a single pointer (`next`) pointing to the next node.

- **T

Diagram:

```text

## 2. Circular Linked List

The `next` pointer of the **last node** does NOT point to `NULL`. Instead, it points back to the **first node (head)**, forming a continuous circle.

- **T

**Diagram:**

```text

Head [Data|Next] [Data|Next] [Data|Next]

```

3. Doubly Linked List

Each node contains **three fields**: data, a pointer to the **next** node, and a pointer to the **previous** node.

- **T

Structure in C:

```c
