

Topic: Intersection Operation

Q. Describe the Intersection operation in Relational Algebra. What are the required conditions for applying it? Illustrate its use with a suitable example.

****Definition to Remember****

The ****In**
that are
requires

Intersection Operation (intersection)

* ****Binary operation**** - operates on two tables.

* ****Sy**

2. Required Conditions (Union Compatibility)

Both relations must be Union Compatible:

1. Same

3. Example

TOP_IN_MATH

| Roll_No | Name | Grade |

| :--- | :-

TOP_IN_SCIENCE

| Roll_No | Name | Grade |

| :--- | :-

Query: Find students with identical records (same Roll_No, Name, and Grade) in both tables.

TOP_IN

Result: Only Emma (102, A) - her entire tuple (Roll_No=102, Name=Emma, Grade=A) is identical in both tables.

(Note: John appears in both tables but with different grades - A in Math, B in Science - so his full tuple is NOT identical, and he is excluded.)

****Must-Write Points (for 10 marks)****

1. Inters
