

Database Functions (Self-Learning)

Q. What is a User-Defined Function (UDF) in SQL? Explain how functions differ from Stored Procedures regarding parameters, return values, and execution contexts.

****Definition to Remember****

A ****Use**
computa
stateme

1. Creating and Calling Functions

Creation: Must declare the return type explicitly.

sql

Calling: Functions return a value, so they are embedded inside SQL - NOT called via `CALL`.

sql

2. Parameters and Return Values

* ****Parameters:**** Functions only accept ****IN parameters**** (input only - no OUT or INOUT).

* ****Re**

3. Procedures vs Functions

| Feature | Stored Procedure | User-Defined Function |

| :--- | :-

****Must-Write Points (for 10 marks)****

1. UDF
