

Types of Linked Lists

Q. Elaborate on the different types of Linked Lists. Explain Singly, Circular, and Doubly Linked Lists with their structures and diagrams.

****Definition to Remember****

Linked L
(last node

1. Singly Linked List

The simplest type. Each node contains data and a single pointer (`next`) pointing to the next node.

2. Circular Linked List

The `next` pointer of the last node does NOT point to `NULL`. Instead, it points back to the first node (head), forming a continuous circle.

* **Tra

3. Doubly Linked List

Each node contains three fields: data, a pointer to the next node, and a pointer to the previous node.

* **Tra

Structure in C:

struct N
