

Flynn's Classification of Computers

Q. Elaborate on Flynn's Classification of computer architectures. Describe SISD, SIMD, MISD, and MIMD with suitable examples.

Definition to Remember

Flynn's
and D

1. The Four Categories of Flynn's Taxonomy

| Acronym | Full Form | Concept & Working | Example |

| :--- | :-

2. Deeper Look at SIMD vs MIMD

* SIMD is highly efficient when the exact same operation needs to be applied to a massive array (e.g., adding brightness to a million pixels on a screen). All ALUs do the same math at the same time.

* MIMD
renders

Must-Write Points (for 10 marks)

1. Flynn's

Quick Recall

Flynn's
-> MIMD
