

Topic: Interrupt Structure and its Servicing - Self-Learning

Q. Discuss the Interrupt structure of the 8086 microprocessor. Differentiate between Hardware and Software interrupts, and explain the sequence of steps the CPU follows to service an interrupt.

****Definition to Remember****

An ****Int**
supports
state is

Interrupt Structure & Servicing in 8086 (Self-Learning)

| Type | Source | Characteristics | Examples |

| :--- | :-

2. The Interrupt Vector Table (IVT)

* Located at absolute memory `00000H` to `003FFH`.

* Supp

3. Interrupt Servicing Sequence

When a valid interrupt is acknowledged, the 8086 performs the following strict sequence to ensure it doesn't lose its place in the main program:

1. Push

****Must-Write Points (for 10 marks)****
