

Database Management System (DBMS) Architecture

Q. Explain the different types of Database Management System (DBMS) Architectures. Differentiate between Two-Tier and Three-Tier architecture.

> **Definition to Remember**

1. Components of DBMS

A typical DBMS architecture consists of:

2. Types of DBMS Architecture

DBMS architectures are classified into three tiers:

1. One-Tier Architecture

2. Two-Tier Architecture (Client-Server)

3. Three-Tier Architecture

[Application Layer]

[Database Layer]

3. Difference: Two-Tier vs Three-Tier

| Feature | Two-Tier Architecture | Three-Tier Architecture |
