

# Types of Data Structures: Linear & Non-Linear

**Q.** Classify Data Structures into Linear and Non-Linear types. Differentiate between them and provide examples of each.

---

> **Definition to Remember**

---

## 1. Linear Data Structures

- Elements are arranged in **sequential order** each element has a unique predecessor and successor.

**Examples:**

| DS | Description |

## 2. Non-Linear Data Structures

- Elements are arranged in a **hierarchical or network** structure.

**Examples:**

| DS | Description |

## 3. Linear vs Non-Linear Comparison

| Feature | Linear | Non-Linear |

...

NON-LINEAR (Tree):

[A]
