

# Self-Learning: Topological Sorting Data Structures

> **Definition:** Topological Sorting of a **Directed Acyclic Graph (DAG)** is a linear ordering of vertices such that for every directed edge  $(u, v)$ , vertex  $u$  comes strictly **before** vertex  $v$  in the ordering.

---

## 1. Detailed Technical Explanation

...

Sampl

Valid Topological Orders:

- 5 ->

### Key Conditions:

1. Topological sorting is defined **ONLY** for DAGs (Directed Acyclic Graphs).

2. If a

---

## 2. Algorithms for Topological Sorting

### 1. Kahn's Algorithm (BFS In-Degree Approach)

1. Compute the **In-Degree** of every vertex in the graph.

2. Pus

### 2. DFS with Stack Approach

1. Initialize a `visited[]` boolean array.

2. For
