

Day 6: Advanced Power Query Transformations

> **Definition to Remember**

1. The Power of Unpivot Columns

- **Problem:** Financial tables often store months as separate columns (`Jan`, `Feb`, `Mar`...).

TALL FORMAT (Ideal for Data Modeling):

2. Append vs Merge Queries

| Transformation | Type | SQL Equivalent | Description |

3. Group By & Custom M Columns

- **Group By:** Aggregates row values (e.g., Total Sales per Customer) directly during ETL.

> **Must-Master Skills & Interview Points**

> **Quick Recall**
