

Day 8: Data Modeling Fundamentals

> **Definition to Remember**

> **Da**
analyti

1. Keys & Relationships

- **Primary Key (PK):** A column containing unique values that uniquely identifies each entity in a dimension table (e.g., `CustomerID`).

- **F**

2. Cardinality Types

1. **One-to-Many (1:*) [Standard & Best Practice]:** One unique record in the Dimension table matches multiple records in the Fact table.

2. **M:**

3. Cross-Filter Direction

- **Single (One-Way):** Filter flows from the **1-side (Dimension)** down to the ***-side (Fact)**. This is the optimal, performant default.

- **B**
