

Day 12: Essential DAX Aggregation & Logical Functions

> **Definition to Remember**

> Esse
and co

1. Core Mathematical & Aggregation Functions

```dax

// Sum

// Row Counts

Total C

## 2. Safe Mathematical Division: `DIVIDE()`

Always use `DIVIDE()` instead of the standard `/` operator to eliminate divide-by-zero crashes:

```dax

3. Conditional Logical Branching: `IF()` vs `SWITCH()`

```dax

// Usin

// Using SWITCH(TRUE(), ...) for multi-condition evaluation (Cleaner than nested IFs)
