

Day 26: Performance Optimization & VertiPaq Engine

> **Definition to Remember**

1. Using the Performance Analyzer

- Built-in diagnostic tool (View Performance Analyzer) recording 3 visual cost components:

2. Column Cardinality & VertiPaq Compression

- VertiPaq stores data **column-by-column** using Dictionary, Run-Length (RLE), and Bit-Packed compression.

3. DAX Optimization Best Practices

- Avoid iterating full tables with `FILTER(AllTable, ...)` when simple column filters suffice.

> **Must-Master Skills & Interview Points**

> **Quick Recall**
