

Day 22: Bookmarks, Buttons & Dynamic Tooltips

📌 Definition to Remember

Advanced report authoring features turn static dashboards into rich, app-like interactive experiences using **Bookmarks**, **Action Buttons**, **Report Page Tooltips**, and **Rules-Based Conditional Formatting**.

1. Bookmarks & Selection Pane Workflows

- **Bookmark State:** Captures visual visibility (hide/show in Selection pane), active slicers, and sort order.
- **Common Bookmark Use Cases:**
 - *Slide-out Filter Panels / Popover Drawers.*
 - *Chart Switchers (Toggle between Bar Chart and Matrix Table views).*
 - *Clear All Filters Button.*

2. Custom Report Page Tooltips

- Creating a tiny, dedicated tooltip canvas (e.g., 320x240 px) with micro-charts.
- When hovering over a customer or product in a main chart, the custom tooltip renders a live 12-month sales trend specifically for that hovered entity.

3. Dynamic Conditional Formatting

- Formatting background colors, font colors, data bars, and icons based on DAX rules or hex color code measures:

```
KPI Background Color =  
IF([YoY Sales Growth %] >= 0, "#00C853", "#D50000")
```

★ Must-Master Skills & Interview Points

1. Difference between Bookmark Data property checked (saves slicer state) vs unchecked (UI toggle only).
2. Creating custom Report Page Tooltips.
3. Hex code measure-driven conditional formatting.

⚡ Quick Recall

Bookmarks (State capture) + Buttons (Actions) + Report Page Tooltips (Hover charts) + Hex DAX Formatting
