

## 5-Mark Questions & Answers -- Data Structures Module 5: Graphs

---

**Q1. Write complete C functions for BFS and DFS graph traversals.**

Detailed C code demonstrating BFS using queue and DFS using recursion/stack on adjacency matrix representation with visited tracking.

---

**Q2. Explain graph representations (Adjacency Matrix & Adjacency List) with examples, diagrams, and complexity comparisons.**

Detailed comparison of space, edge lookup, neighbor iteration, and suitability for dense vs sparse graphs.
