

Sorting Techniques: Bubble Sort, Insertion Sort & Selection Sort -- Data Structures

Definition: Sorting is the algorithmic process of arranging elements of a collection into a systematic order (ascending or descending).

1. Detailed Technical Explanation

1. Bubble Sort (Comparison & Swap)

* Mechanism: Repeatedly steps through the list, compares adjacent elements, and swaps them if they are in the wrong order. The largest element "bubbles up" to its correct position at the end of each pass.

```
void bubbleSort(int arr[], int n) {
    for (int i = 0; i < n - 1; i++) {
        int swapped = 0;
        for (int j = 0; j < n - i - 1; j++) {
            if (arr[j] > arr[j + 1]) {
                int temp = arr[j];
                arr[j] = arr[j + 1];
                arr[j + 1] = temp;
                swapped = 1;
            }
        }
        if (!swapped) break; // Array is already sorted
    }
}
```

2. Selection Sort (Minimum Element Selection)

* Mechanism: Divides array into sorted and unsorted subarrays. Repeatedly finds the minimum element from the unsorted subarray and places it at the beginning of the unsorted part.

```
void selectionSort(int arr[], int n) {
    for (int i = 0; i < n - 1; i++) {
        int min_idx = i;
        for (int j = i + 1; j < n; j++) {
            if (arr[j] < arr[min_idx])
                min_idx = j;
        }
        int temp = arr[min_idx];
        arr[min_idx] = arr[i];
        arr[i] = temp;
    }
}
```

3. Insertion Sort (Card Player's Sorting)

* Mechanism: Builds the sorted array one item at a time by picking the next element and inserting it into its correct relative position within the already-sorted left subarray.

```
void insertionSort(int arr[], int n) {
    for (int i = 1; i < n; i++) {
        int key = arr[i];
        int j = i - 1;
        while (j >= 0 && arr[j] > key) {
```

```
        arr[j + 1] = arr[j];
        j--;
    }
    arr[j + 1] = key;
}
```

2. Comprehensive Comparison Table

Algorithm	Best Time	Average Time	Worst Time	Space	Stable	In-Place
Bubble Sort	$O(N)$	$O(N^2)$	$O(N^2)$	$O(1)$	**Yes**	**Yes**
Selection Sort	$O(N^2)$	$O(N^2)$	$O(N^2)$	$O(1)$	**No**	**Yes**
Insertion Sort	$O(N)$	$O(N^2)$	$O(N^2)$	$O(1)$	**Yes**	**Yes**

3. Quick Recall Flow

Bubble: Swap adjacent (Bubble largest to right) | Selection: Find min and swap to front | Insertion: Shift and insert into sorted subarray
