

Day 23: Power BI Service & Collaboration

[DEF] Definition to Remember

Power BI Service is the cloud SaaS platform (app.powerbi.com) where published semantic models and reports are organized into workspaces, packaged into enterprise Power BI Apps, and shared securely across organizations.

1. Workspaces & Workspace Roles

- * Workspaces: Staging and development environments for BI teams.

Workspace Role	Permissions & Capabilities
Admin	Full control: delete workspace, manage
Member	Add/edit reports, build apps, manage p
Contributor	Create, edit, and publish reports and
Viewer	Read-only access: interact with report

2. Power BI Apps vs Direct Sharing

- * Power BI App: The official enterprise distribution mechanism. Packages approved reports into a unified portal with customized left-hand navigation and role-based audience management.

3. Automated Subscriptions & Alerts

- * Email snapshot subscriptions delivered to executives daily at 8:00 AM.

[MUST-WRITE] Must-Master Skills & Interview Points

1. Why enterprise deployments distribute reports via Power BI Apps instead of giving users direct workspace access.
2. Explaining the 4 Workspace Roles (Admin, Member, Contributor, Viewer).
3. Setting up data-driven alert notifications.

[RECALL] Quick Recall

Desktop (Author) -> Workspaces (Dev Team Roles) -> Power BI Apps (End-User Distribution)
