

Day 29: End-to-End Professional BI Project

[DEF] Definition to Remember

Building a production-grade Business Intelligence dashboard requires executing the complete lifecycle: raw data ingestion, dimensional star schema modeling, core DAX metric development, executive UI design, and cloud deployment.

1. Project Scenario: Global Enterprise Executive Sales Dashboard

* Objective: Enable the C-Suite and regional directors to monitor \$50M+ in annual revenue, gross margins, customer retention, and regional performance.

2. Step-by-Step Implementation Roadmap

Step 1: Power Query ETL

Step 2: Star Schema Modeling

Step 3: DAX Core Measures Suite

Step 4: UI/UX Dashboard Layout

Step 5: Service Deployment & RLS

[MUST-WRITE] Must-Master Skills & Interview Points

- 1. Ability to walk an interviewer through the entire architecture from raw data to published app.
- 2. How you handled messy edge cases during ETL and optimized DAX calculation times.
- 3. Documenting business requirements and stakeholder KPIs.

[RECALL] Quick Recall

Raw Data -> Power Query ETL -> Star Schema -> DAX Measure Suite -> Executive UI -> RLS & App Publish
