

Topic: Selection Operation

Q. Explain the Selection operation in Relational Algebra. Write its syntax and provide examples demonstrating how it filters tuples.

> **Definition to Remember**

Selection Operation ()

- Operates on a **single table** (unary).

2. Syntax of Selection

{<predicate>}(Relation_Name)

- **Predicate:** Uses comparison operators (=, <, >,) and logical operators (AND, OR, NOT).

3. Examples

Input Relation: EMPLOYEE

| Emp_ID | Name | Department | Salary |

Example 1: Simple Condition

Example 2: AND Condition (AND)

Example 3: OR Condition (OR)
