

Object-Relational DBMS (ORDBMS) (Self-Learning)

Q. Write a detailed note on Object-Relational Database Management System (ORDBMS). Highlight its features, advantages, and how it differs from a traditional RDBMS.

> **Definition to Remember**

1. Object-Oriented Concepts in Relational Databases

Traditional RDBMS is limited to simple atomic types (integers, strings). ORDBMS adds:

| OOP Concept | Meaning in ORDBMS | Example |

2. Features of ORDBMS

1. **Complex Data Storage:** Stores and queries complex media (audio, video, spatial (GIS) data, large documents).

3. RDBMS vs ORDBMS

| Feature | RDBMS | ORDBMS |

4. Advantages of ORDBMS

- **Best of Both Worlds:** Relational reliability + object-oriented flexibility.

> **Must-Write Points (for 10 marks)**

> **Quick Recall**
