

Flynn's Classification of Computers

Q. Elaborate on Flynn's Classification of computer architectures. Describe SISD, SIMD, MISD, and MIMD with suitable examples.

> **Definition to Remember**

1. The Four Categories of Flynn's Taxonomy

| Acronym | Full Form | Concept & Working | Example |

2. Deeper Look at SIMD vs MIMD

- **SIMD** is highly efficient when the exact same operation needs to be applied to a massive array (e.g., adding brightness to a million pixels on a screen). All ALUs do the same math at the same time.

> **Must-Write Points (for 10 marks)**

> **Quick Recall**
